1. List the phases of a compiler?
2. What is the role of a lexical analyzer?
3. Define a token with an example.
4. What is meant by lexeme?
5. What is input buffering and why is it needed?
6. What are regular expressions used for in lexical analysis?
7. What is Lex tool?
8. What is the difference between top-down and bottom-up parsing?
9. Explain the role of symbol table and error handling in a compiler?
10. Discuss the advantages of using Lex for lexical analysis?
11. Explain LR parsing and its significance in compiler design?
12. Explain about the benefits of using Lex and YACC tools
