1.What is the need of dt in engineering

2.What are the different stages in dt

3.Diff linear innovation and non-linear innovation

4.What are the diff tools in empathy

5.What is convergent thinking

6.List any two features of dt

7.What is meant by latent need in problem articulation

8.Diff brain storming as an ideation technique

9.What is meant by affinity diagram

10.Classify needs and importance of dt

1.Explain the seven steps of engineering in dt process

2.Explain linear innovation and non-linear innovations with examples

3.Explain three box thinking and three box frame work with emphasis on three box ideation

4.Discuss (a e I o u) empathy maps as a tools in dt

5.Elaborate systematic inventive thinking sit methods with suitable examples

6.Discuss empathy process for deep understanding of challengers and practical ingenuity

7.Explain the different models of framing maps used in dt and how can customer journey map and persona the use full in defining problem effectively

8.Explain how brain storming helps in ideating and problem articulation

9.discuss how creative thinking fuels innovation

10.Explain best practices for effective synthesis
